### **1) Explanation**

The LoskNar Technical document can be updated and/or modified at any time.

LoskNar does not provide obligations, promises or guarantees in any form, including other organizations mentioned in this document.

No part of this technical document should be considered as a recommendation to buy or invest.

All investments, including cryptocurrencies, contain volatility and significant risk.

The use of this technical document does not constitute financial advice in any form.

This white paper does not constitute an offer or financial advice in relation to any investment, currency or security.

LoskNar is exempt from all claims and/or damages, indirect or personal, caused by a typo, error, inaccuracy or omission contained in this technical document.

The LoskNar technical document has been compiled and assembled with the utmost integrity.

Accuracy and transparency were the main areas around which the white paper was built.

There are no guidelines in the LoskNar white paper.

The use of charts should not be used exclusively for making investment decisions.

No representations or warranties are made as to the accuracy of such proposed forward-looking statements.

## **2) Why LoskNar**

Simplified and secure way of giving and receiving NFT

The patented LoskNar Token (LOSK) removes stress and anxiety about hacking.

Four-step security encryption always ensures secure delivery and access.

(LOSK) provides a unique platform that allows the client to securely send NFT. Safely check your NFT without fear of hacking or theft of your digital address.

A unique application (LOSK) in the digital world allows customers to send NFT to people of any age.

Our application (LOSK) includes a "Temporary lock function". This function allows the client to set a predetermined date.

## **3) Basic position**

LoskNar offers a secure, reliable and easy-to-use process that allows individuals to donate cryptography.

Simplifying the multifaceted, complex and risky task of acquiring an NFT and sending it to someone else.

LoskNar facilitates navigation in space.

LoskNar is a revolutionary application that allows future generations to benefit from NFTs made today.

Entering the market first shows the world that LoskNar is ready to become a pioneer in the industry.

The creation of LoskNar was done to solve a variety of problems common in the space by developing a process that creates a secure way to transfer assets.

LoskNar was designed as a platform for people to enable individuals to protect their NFT as well as physical assets that should never be lost or stolen.

LoskNar is equipped with a variety of functions that meet the needs, ranging from a novice crypto investor to an experienced trader and enthusiast.

Innovations are most brilliant when their process can be simplified.

Regardless of whether an individual sends NFT from his wallet to his children or a corporation protects its digital assets, LoskNar is the answer.

Unique and dynamic series of codes and sequences ensure that the personal storage of individuals will open only on the date requested by them.

Time blocking makes life easier for customers, but not for hackers.

You can easily transfer any NFT from any trading platform to your wallet.

To do this, you will need to translate the NFT with a special LoskNar application and encrypt token (LOSK).

#### **4) LoskNar Token (LOSK)**

The LoskNar token (LOSK) will initially be our main payment instrument in the ecosystem.

This is the BEP 2 token issued in the Binance smart chain.

LOSK tokens are an integral part of every field of cryptography, from the exchange to the NFT Marketplace.

Although our system allows you to use and purchase many popular tokens and coins, (LOSK) will be central to every transaction.

Ease of use was a major component in the creation of the program.

As is the case with most of the questions that arise from federal oversight committees regarding the digital space, how can LOSK protect against the bad guys? Our main goal in the fight against major international crimes is to support the practice of combating money laundering, so that the sender and recipient are always registered in all transactions, as well as timestamps and registry information.

In no case do we support a product for money laundering or terrorist financing.

Our international payment systems comply with all regulatory requirements.

They are reliable, safe and comply with legal requirements.

LoskNar (LOSK) is the beginning of an exciting era of investing and preparing for future ways previously unimaginable.

Пришло время заглянуть в будущее.

#### **5) Our mission and vision**

Our mission is to make NFT crypto transactions simple and secure for everyone.

Our system will allow individuals to securely transfer and share NFT with anyone.

Our vision at LoskNar (LOSK) is to democratize available technologies while using blockchain, making our services accessible to everyone.

NFT exchange and digital asset storage will be safe, secure and easy to use.

#### **6) Problems in space**

Can't send an NFT that you thought was safe?

Have you discovered on your favorite site that your account has been deleted or, even worse, completely emptied?

This is a gambling game that 15% of the world's population involved in the crypto investment space face every day during all transactions.

While countries around the world are trying to figure out how to tackle and control this ever-growing financial metaverse, LoskNar (LOSK) has a solution that works on both sides of the aisle and in all aspects of decentralized finance.

Decentralized Finance (DeFi) is a system in which customers can access financial products directly on a

decentralized blockchain network, without the need for intermediaries such as banks and brokerages.

Many voters both in Congress and on Wall Street view the DeFi space as the "New Wild West."

A place where unregulated and undocumented transactions are commonplace.

Over the years, news agencies have covered numerous horror stories about "cryptomillionaires" who lose all their savings due to the fact that a hard wallet or a server associated with it has been hacked, stolen or destroyed.

When a novice or experienced crypto investor enters the wrong number when transferring or enters the wrong receipt code, the entire amount of money is lost forever.

It happens every day, which happens too often.

A safer way to move NFT from one place to another is needed.

A more secure way is needed that protects your personal NFT without fear of losing it.

Water, fire and theft can suddenly erase millions of dollars in a matter of seconds, without the possibility of recovery.

## **7) Inside LoskNar (LOSK)**

Patented pending, secure and reliable four-step process for sending digital NFTs around the world.

LoskNar allows the client to send NFT in cryptocurrency (LOSK).

For an experienced investor who wants to combine their NFT acquisitions into a single coin (LOSK) at a certain cost.

LOSK allows customers to store, send and receive large volumes of NFT without being tracked or destroyed by unwanted persons in the digital sphere.

LOSK reduces the gap between populations that do not trust or do not understand the crypto world.

Ease of use makes it accessible to both seniors and juniors to understand the new global digital arena, safely saving money for the future.

## **8) Ease of use**

The ease of use of our LoskNar (LOSK) makes it accessible to both seniors and juniors to understand the new digital arena in the world.

LoskNar (LOSK) makes it possible to reliably protect digital assets for the future.

Reflections and built-in styling are provided for owners of long-term LoskNar (LOSK).

As the owner of LoskNar (LOSK) for 12 months or more, you activate the bonus feature built into the LoskNar (LOSK) encoding.

The main goal of LoskNar (LOSK)

is to restore and establish a normal life in the digital metaverse.

Providing hassle-free transactions combined with a simple, easy-to-use LoskNar (LOSK) format will be the answer to many wayward prayers.

## **9) Keep assets today, for tomorrow**

As responsible adults, our task is to ensure a bright and prosperous financial future for the next generation.

Those who are lucky enough to become part of LoskNar (LOSK) will have at their disposal a new invaluable tool for creating wealth.

LoskNar (LOSK) has the ability to send a person's digital crypto assets (NFT) into the future or simply translate them into the present tense.

Unlike the usual storage on special sites, which hackers can access at any time, LoskNar (LOSK) is guaranteed to transfer your asset into a LOSK coin and transfer it in the existing time or at the appointed hour to your wallet.

LoskNar (LOSK) helps with time blocking and prevents the loss of funds due to impulsive spending or waste.

We all kicked ourselves for not investing in bitcoin 10 years ago.

The sad truth is that the means of protecting Bitcoin 10-12 years ago were not reliable or realistic for long-term storage.

The LoskNar (LOSK) system allows you to own NFT more securely today, tomorrow and in the distant future.

LoskNar (LOSK) capabilities also allow you to store assets over time.

LoskNar (LOSK) will provide our clients with the opportunity to contribute and share valuables such as NFT, music, insurance policies, property documents.

The recent natural disasters that have struck our world and led to the complete loss of homes, lives and property around the world, constantly reinforce the need for an alternative repository of important documents and information.

## **10) LoskNar (LOSK) Team**

General manager - Gabidullin Shamil

Head of the NFT Trading Platform - Alexander Morozov

Lead Developer - Anna Bursevich

Technical Director - Eric Ilgizovich

## **11) Road map**

### **Stage 1**

Preparing the LoskNar team

Social networks and Telegram community

Social networks and the Instagram community

Social networks and the Twitter community  
Social networks and the YouTube community  
Website design and development  
Whitelist of coins

## **Stage 2**

Coin Development (LOSK)  
Free distribution  
Private sale to investors  
creating a pinksale contract.finance  
The output of the coin on Pancakeswap.finance  
Coin Output on Coinmarketcap.com  
Coin Output on Coingecko.com  
Audit check

## **Stage 3**

Exit (LOSK) on other exchanges  
Developing your own NFT  
Additional contest, coin draw (LOSK)  
Maximum promotion of the coin (LOSK) for advertising purposes

## **Stage 4**

Connecting MetaMask to the site  
Additional draw, free NFT  
Testing application (LOSK)  
Promotion in social networks

## **Stage 5**

Start of NFT sales on the website  
Search for additional trading platforms with the sale of NFT  
Connecting the application (LOSK) to the main blockchains  
Connecting to the APP Store, Google Play k (LOSK)  
Connect to charitable foundations

## **12) NFT Gallery**

In the mind of every artist, in the programming of every smart contract, there is a masterpiece that needs to be protected.

As we evolve in an area that will change the dynamics of how we, as a society, interact with digital technologies, the cryptography generation will need a secure, reliable and easy way to store their masterpieces with maximum confidence.

Welcome to LoskNar (LOSK)!

## **13) LoskNar (LOCK) - problem solving**

LoskNar (LOSK) - problem solving.

LoskNar (LOSK) provides many benefits to NFT enthusiasts, investors, collectors and creators.

The ability to buy, sell and trade NFT within (LOSK) gives a financial advantage to the creator and those who own the asset.

Those who work in the field of NFT have expressed concern about the amount of fees charged to the buyer. NFT cannot be or be used together like cryptocurrencies, although they are built on the same blockchain

A secondary problem plaguing the NFT space is that NFTs are written on different blockchains and do not have the ability to be sold on alternative platforms.

LoskNar (LOSK) has created a space that includes all

the blockchain or smart contracts on which NFT can be built, and it can be sold and bought using a coin (LOSK), which eliminates the need to worry about what currency you need to have to buy.

The advantage of the creators.

With the development of our own blockchain system, the creators will gain a financial advantage by using LoskNar (LOSK) in many ways.

The biggest advantage of this is the storage in a safe place held by the artist and/or creator for after-sales of their product.

This is a huge victory for the creators.

LoskNar (LOSK) removes restrictions on the type of cryptocurrency needed to purchase NFT.

LoskNar (LOSK) cryptography makes it extremely simple and attractive for both NFT creators and buyers.

## **Certificate**

After purchasing your (LOSK), an option will appear that we will like in the NFT community.

A QR code will be placed on each coin (LOSK) to check the data and prices in real time for your NFT, which is in storage.

Also on this QR code you will be able to see transactions that were made using a specific (LOSK).

LoskNar (LOSK) will also offer printed NFT certificates that can be purchased for display at your home, office, enterprise or studio.

When you make a purchase of digital art, transferring it to the physical level is something we haven't seen before.

LoskNar (LOSK) will provide you with the most luxurious and high-quality printed certificate.

With the QR code attached to it, people can use it to verify the authenticity of your product.

Revolutionize the game

The revolution in the way we buy, store and sell NFT is to make everything as simple and easy as possible for our customers.

With further development, the LoskNar gallery (LOSK) will become the embodiment of the dream of NFT enthusiasts.

#### **14) Security measures**

Most crypto companies waste pages and pages of their white paper explaining how good their security protocols are, they also provide a step-by-step roadmap for hackers to take apart their system... LoskNar (LOSK) has learned from the mistakes and missteps of our predecessors.

What we promise our customers is simple: LoskNar (LOSK) is protected by industry-leading third-party testing, proven POS and data storage systems. We didn't have to reinvent the wheel, instead we use the best in the DeFi space, which constantly tests and improves the overall security of digital metaverses.

The largest companies in the DeFi space trust these companies to protect their databases and money transfer systems, and so do we.

We have added an additional layer of protection by integrating our systems together with our proprietary protection.

We have decentralized storage and security platforms built into our process that use a unique combination of multi-level as well as complex dual coding, making the DeFi space safe, secure and easy to use.

At the heart of everything we do. Unfortunately, for precautionary reasons, we will no longer disclose internal protocols and processes related to the security of cryptographic repositories.

After all, it's LoskNar (LOSK), we can't give you a combination!

#### **15) Tokenomics**

Experienced investors in the crypto space are already taking advantage of betting and other interest- and value-generating tools available in the DeFi space.

However, newcomers to the market are often not informed about the additional rewards and benefits of owning a cryptocurrency over time.

LoskNar (LOSK) owners automatically receive rewards displayed in their LoskNar (LOSK), as well as in their personal wallets.

LoskNar (LOSK) is added to each owner's token balance without additional purchase required by the owner.

This is a huge added value over time.

Outside, with each transaction (LOSK), 5% of the reflections will be returned and redistributed at a rate of 4% to all holders and 1% to marketing.

Full Token Supply 10,000,000,000 Tokens (LOSK)  
address 0x4cAd9bfcF8Dee4881c5A669Af7723E343815Ad38

### 16) The name of the LOSK token

Segment	General Offer	Release schedule
Awards	3%	Free distribution
Public sale	8%	Sales before listing
Ecosystem	42%	0.1 % - 1.3 % Will be unlocked at TGE  The remainder is distributed through the linear unblocking management, starting from 01.01.2023. In the duration of 100 years.
Fund LoskNar	15%	Will be distributed through management
Private Sale	15%	Unlocking TGE 1% Linear distribution after TGE 24 months
Team and Advisors	17%	Unlocking TGE 1% Linear distribution after TGE 24 months
Total	100%
